Is there a difference between Stochastic and Probabilistic ... They are used pretty interchangeably. Probabilistic is probably (pun intended) the wider concept. Stochastic describes a system whose changes in time are described by its past plus probabilities for successive changes. E.g., the price of a st. What about the extended $N(0, \sigma^2)$ case? It is as simple because we can compute the probability $P[X = +1]$, if we know all the probabilities p . Stochastic - Wikipedia The word stochastic is an adjective in English that describes something that was randomly determined. ... In music, mathematical processes based on probability can generate stochastic elements. Stochastic processes may be used in music to compose a fixed piece or may be produced in performance.

Stochastic process - Wikipedia In probability theory and related fields, a stochastic or random process is a mathematical object usually defined as a collection of random variables. Historically, the random variables were associated with or indexed by a set of numbers, usually viewed as points in time, giving the interpretation of a stochastic process representing numerical values of some system randomly changing over time.
